Nonwovens

Fully automatic cut 'n' seal unit

Padded medical dressings of different shapes and sizes are made with this fully monitored production unit. Five winding units lay the different layers of material into a multilayer strip, from which the compresses are cut out by ultrasound in a highly effective soundproof cubicle to a maximum size of 160 x 200 mm. Various sensors look after complete monitoring with appropriate error displays (material back-up, drop control, roller feed). The waste material is neatly rolled up after the cutting out and removal of the parts.

Cut 'n' Seal portal for nonwovens applications up to 720 mm seam
