

AMTEC

Applied Manufacturing Technologies, Inc.

Plastic Welding

Apart from the main application, which is welding injection-molded thermoplastic parts, this technology is also suitable for riveting, remodeling, beading, and imbedding metal parts in thermoplastic materials.

Ultrasonic Welding Systems

Generators

Actuators

Handwelding Unit

Multiconvertor

Applications

Ultrasonic Welded parts

Each ultrasonic welding unit consists of pneumatic press, convertor, booster, sonotrode, ultrasonic generator and controller unit. AMTEC, from standard bench top welding presses and generators with full microprocessor control through to individual actuators and sophisticated special machines meeting your exact specifications and the requirements of your production.
